## THE HIGH-QUALITY LENSES THAT OUR BABIES NEED

*BlueBlock*™ Lenses protect from the harmful rays of blue light, thus reducing the risk of future eye disease (AMD).

**Polarized lenses** for protection against glare.

**Photochromic lenses** offer an adaptive intensity change to ambient light; a technology never seen before in baby sunglasses. They provide greater comfort both indoors and outdoors, as there is no need to constantly put them on and take them off when going for a walk or shopping. This option, which is revolutionary worldwide, allows babies to get used to wearing glasses more easily and helps treat photophobia in children.

## Durable and Light

Nanovista lenses are anti-reflective on the inner side and the new **anti-scratch treatment** makes them even more resistant to scratching. \*(according to reference).

**Ultra-light weight dual-injection frames for added comfort.**

- We maintain the **'unbreakable'** concept that characterises our brand, offering durable and safe glasses.
- 2 different shapes that adapt to the morphologic development of babies.
- A rounded and soft line for very young children, and another slightly rectangular line to enlarge the field of vision as they grow.
- Each pair of sunglasses is also available in two sizes.

**Includes mini band**  
for a better fit if necessary.
