SPORTS PROTECTION

SPORTS PROTECTION

PROVEN GROWTH RECORD

Business line in constant growth since 1999.

Net user base of people engaged in sports activities with visual correction needs, has continuously grown ever since.

Concern for visual health and awareness regarding the need for protection against ocular injuries continued to increase.

SPECIALIZATION AND TECHNICAL EXPERTISE

Two key drivers to help you:

- Boost the added perception of your professional services..
- Expand your optical service portfolio, building loyalty amongst your most profitable customers and attracting new ones.
- Develop a more comprehensive and consistent marketing strategy, aimed at increasing awareness regarding the convenience of owning several eyewear items.

GUARANTEED RETURNS

MINIMAL INVESTMENT

WHATS YOUR GAME?

This simple question in your practice can be the best cross selling opportunity you may have in your store.

LET THE WHOLE WORLD KNOW

We collaborate with you attracting new customers letting them know you are an specialized optician in Sport Protection Eyewear. Check your sales agent for more info.

MAKE THE DIFFERENCE

Diferencial competitive values.

This business line will allow you to stand out from competitors.

Why use Protective Sports Eyewear?

When playing sports, both our teammates' and rivals' limbs (fingers, hands, elbows...) and any other element that is an integral part of the game - balls, rackets, sticks... you name it - become serious threats to our eyes' integrity.

Frames labeled under the "sports" category only offer protection against solar radiation and other atmospheric agents. Through the design of specific protective components and systems and the use of certain manufacturing materials, only Protective Sports Glasses can offer the required level of protection against strikes and impacts while practicing sports.

The use of Protective Sports Frames equipped with prescription or regular polycarbonate lenses could prevent 90% of ocular injuries that people suffer while engaging in sports activities.

Protective Sports Prescription Eyewear vs. Contact Lenses

Contact lenses may solve the visual issues that affect people who engage in sports, but they will never be able to prevent the ocular injuries caused by impacts. .

What sports are Protective Sports Eyewear recommended for?

The use of ocular protection is advisable when engaging in any kind of sports activity, but Protective Sports Glasses are especially recommendable when taking part in contact sports or any sports activity that entails a risk of impact due to the use of balls, sticks, Etc.

What types of lenses should be fitted on Protective Sports Glasses?

Only polycarbonate or Trivex lenses should be glazed on Protective Sports frames in order to yield the required protection and meet applicable certification requirements.

FAQS

HOMOLOGATIONS

Are VerSport's Protective Sports Eyewear certified?

Yes, all of **VerSport's** Protective Eyewear meet or exceed current standards in official certification matters. They have been designed and manufactured to conform to **European Standard EN166:2001** requirements and have been approved by the main Sports Federations.

VERSPORT
www.versport.com

Also, **VerSport's** **Protective Sports Frames** have earned the specific sports type-approval certification from the Technological Institute of **Optics AIDO**. This sports certification is granted upon successfully completing of a series of real-life tests and trials in the practice of sports, such as:

Eye and orbit protection against impact from different sporting elements (balls, sticks...)

- **Resistance of frames against impact from football balls at different speeds.**

- **Resistance of frames against impact from basketball balls at different speeds.**

- **Resistance of frames against impact from tennis balls at different speeds.**

- **Water vapor evacuation and condensation prevention in sports activities (fogging tests)**

RX LAB

VerSport's manufacturing and Rx lab is highly specialized adapting specific ophthalmic lenses to sports eyewear.

All the sport frames in this catalogue can be purchased fully RX'able customized to fit your customers' prescription needs with polycarbonate or Trivex lenses.

TECHNOLOGY

IMPACT RX & ENDUR RX

Exclusive materials based on high polymers performance that provide maximum strength, anti-impact protection, safety, elasticity and the greatest comfort during sports practice.

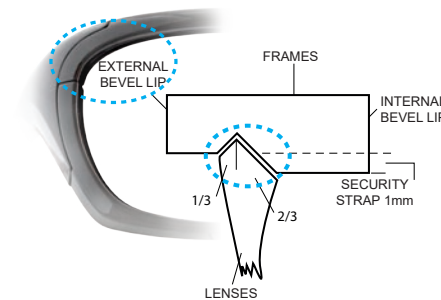

DUAL LOCK PATENTED

The patent-pending Dual Lock rim closure system enables a highly simplified assembly process, while guaranteeing maximum safety.

QTEM Quick Twist Exchange Mechanism

Quick exchange system of temples patented by VerSport.

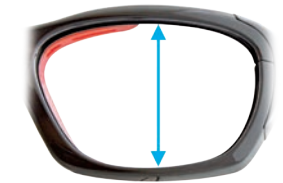

SECURITY BEVEL EDGE

The security bevel edge yields maximum protection reinforcement. In case of a violent impact, the oversized inner bevel edge prevents the lens from detaching and striking the eye's orbit.

antiSHOCK&AIRflow

The pads have been especially designed to protect the face from eventual strikes while offering maximum comfort and ensuring optimal air flow, minimizing fog build-up in the lenses, and thus improving visibility.

+HEIGHT = +PROTECTION

Our ample height frame designs have been devised to guarantee increased protection, and to allow the adaptation of progressive lenses.

FLEXFIT

Thanks to their special design and build material, the temples are very flexible.

SOFT COMFORT

The Dual-Rubber Technology of the temples provides both elasticity and adherence, ensuring a proper fit and maximum comfort.

TWO FRAMES IN ONE

Two exchangeable fixing options included with each frame*

WITH HEADBAND

WITH TEMPLES AND STRAP

*Not available for Olympo styles

QTEM^{PATENTED by VERSPORT} (QUICK TWIST EXCHANGE MECHANISM)

Exchange system of long temple and headband

Exchange system allows the change between the long temple and the headband; a simple turn that blocks in safely

Scan this QR code to see the explanatory video of temple exchange to the headband with the QTEM system.

VERSPORT
www.versport.com

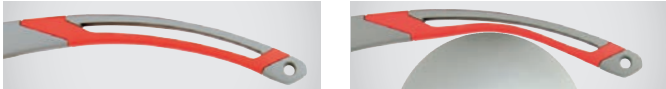

AERO BRIDGE

Creates an efficient airflow in the critical vision zone. The horizontal slots scale rotationally over the bridge allowing an adjustment range according to the morphology of the user.

WISH BONE TEMPLE TIP

Inspired by the concept of the "crossbow suspension", the ultra soft rubber strip soft adapts to the morphology of the ear, creating a cushioning effect. An unknown and daring technological innovation in the continue search of comfort during sports practice.

DYNAMIC TEMPLE SHAFT

Dynamic and desing without sacrificing security on the field of play.
